

# **Exploring Human-Like Translation Strategy with Large Language Models**

**Zhiwei He**

# Traditional training process of NMT

# Machine v.s. Human translation

- NMT models are trained to perform source-to-target mapping.
- A human translator can take preparatory steps to ensure high-quality translation.

# Human-like strategies in LLM

*Let's think step by step, ...*

Chain-of-Thought

*Let me do a reflection and think about how to improve my strategy, ...*

Reflexion

*Let's take a step back and generate a more generic question, ...*

Step-Back prompting

# Exploring Human-Like Translation Strategy with LLM

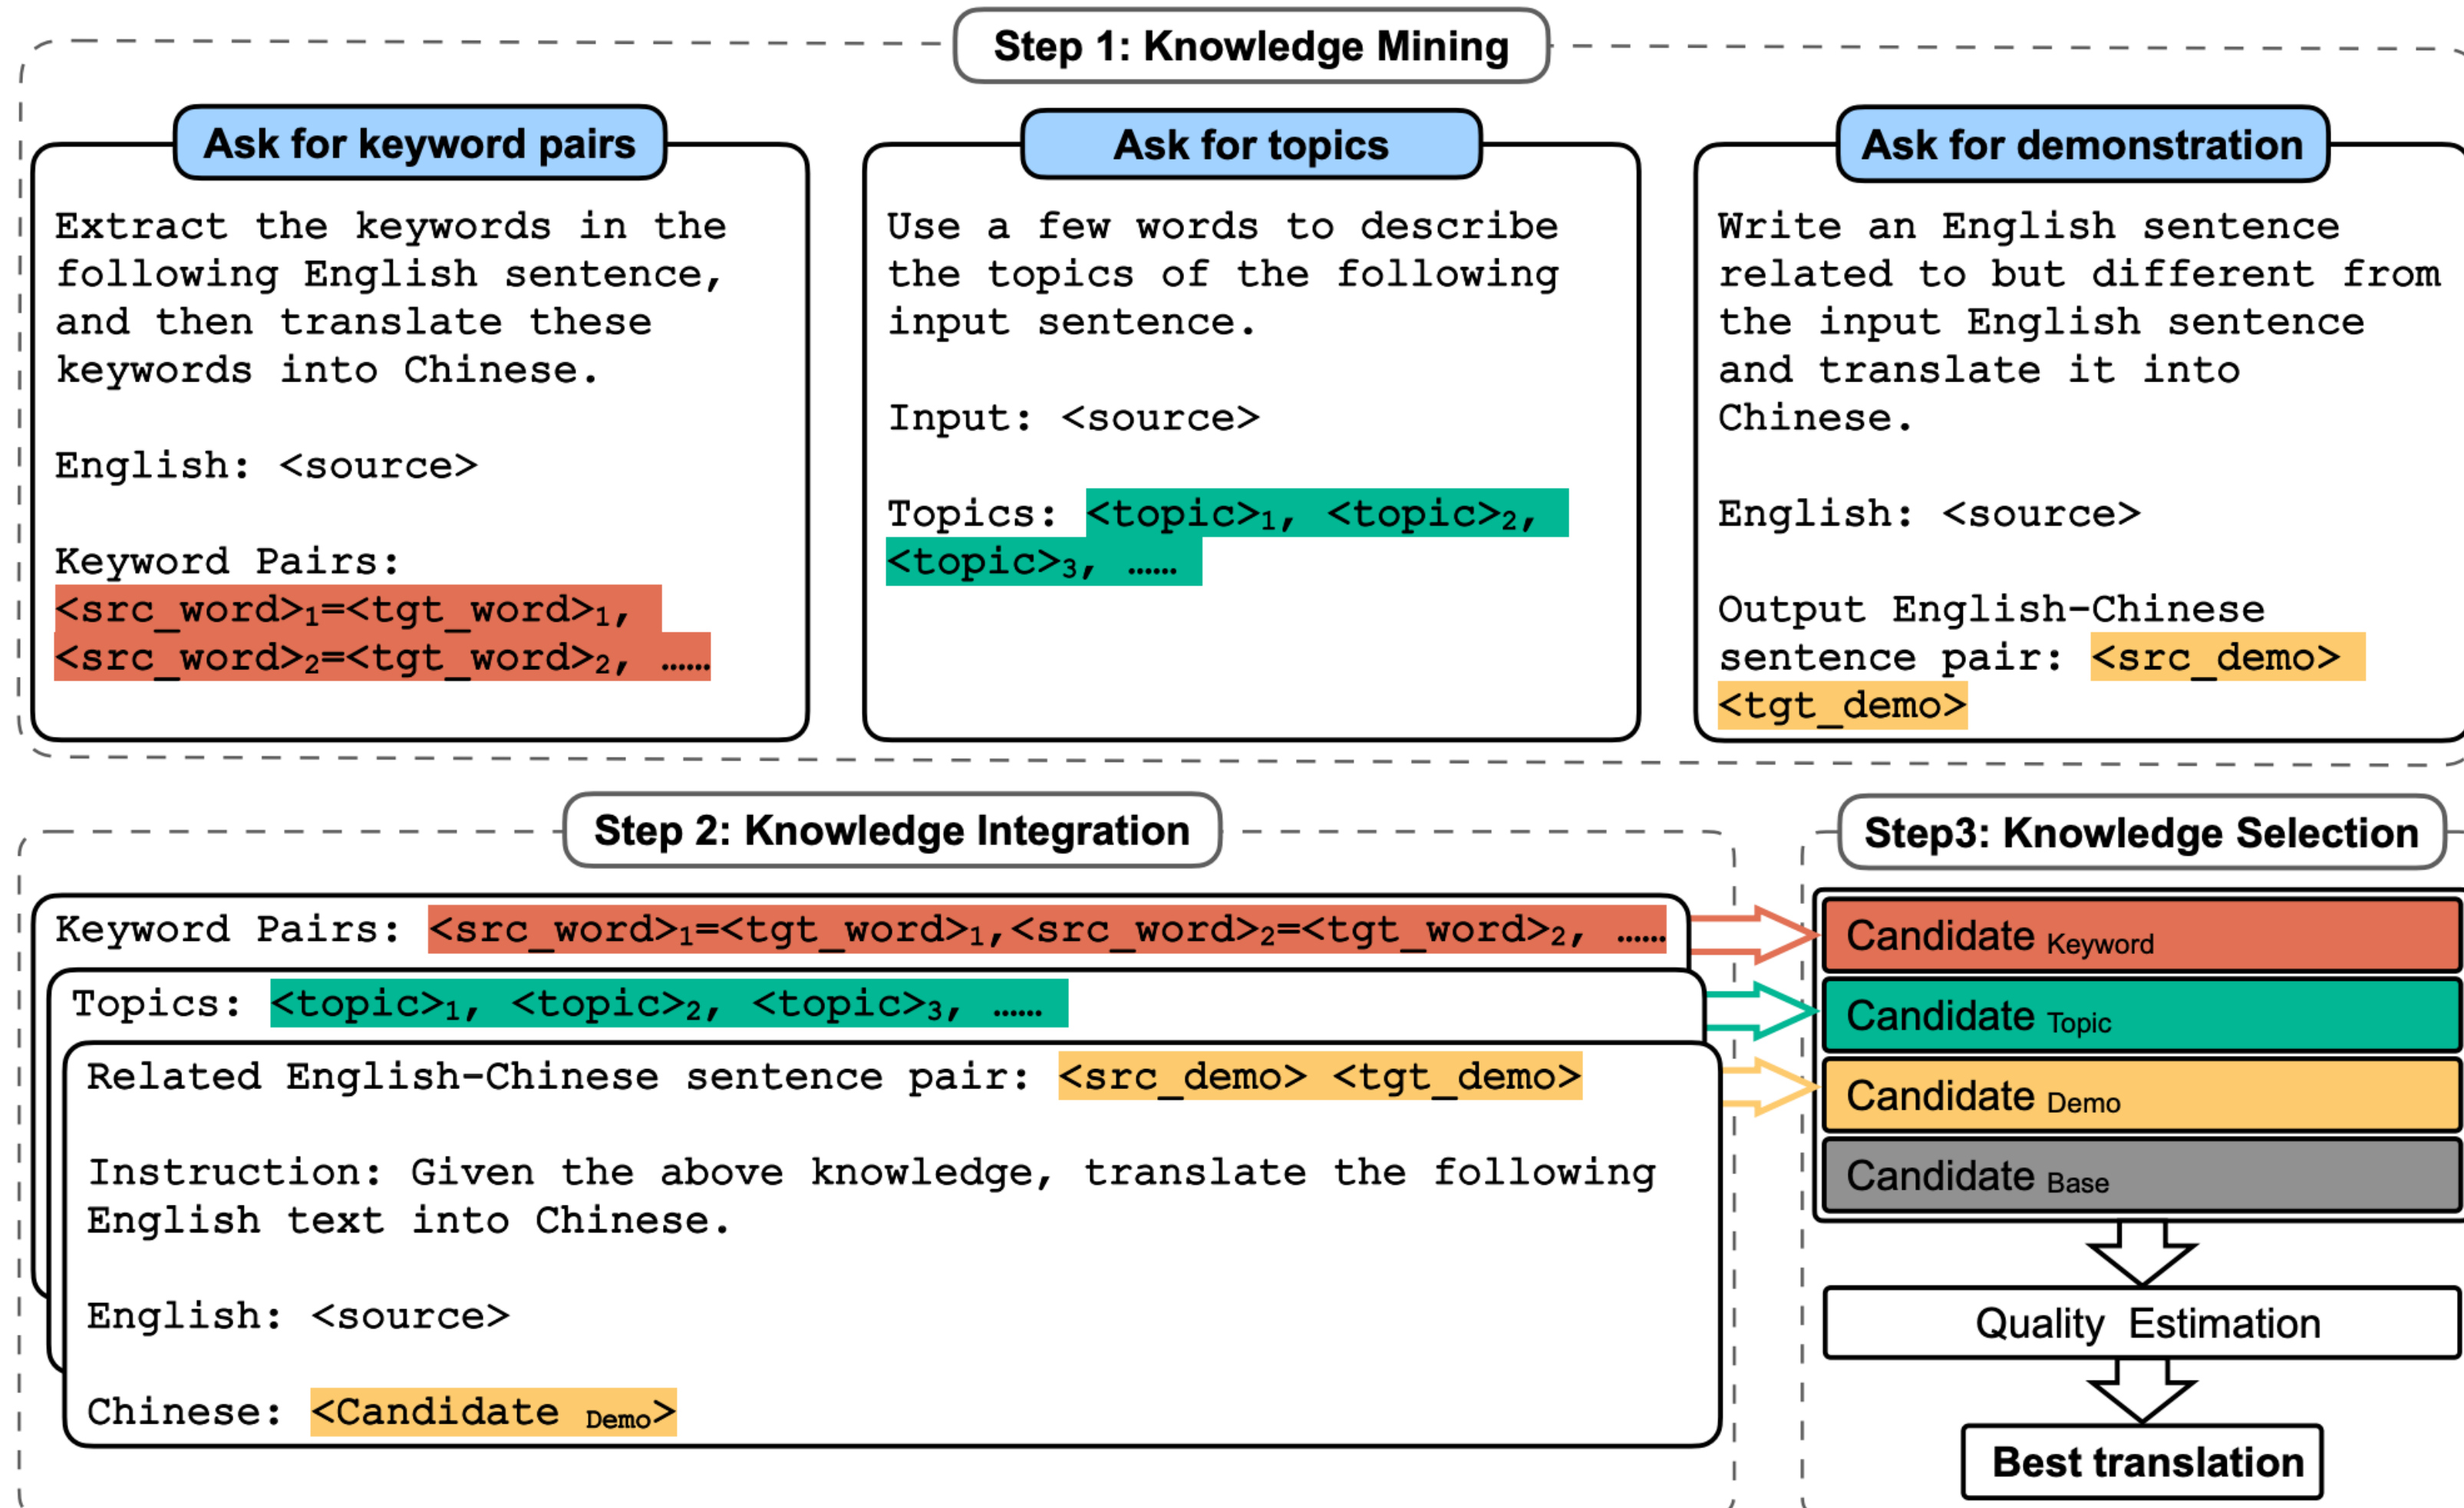

How to translate the **keywords**?  
What's the sentence's **topic**?  
Any **similar examples**?

- ✓ Identify **keywords** and consider how to translate them
- ✓ Reflect on what the main **topic** of this text is
- ✓ Consider how **similar sentences (demonstrations)** are translated.
- ✓ .....

# MAPS: Multi-Aspect Prompting and Selection

## Prompting

# MAPS: Multi-Aspect Prompting and Selection

## Selection (or reranking)

- **LLM-SCQ**: Composing a single choice question (SCQ) that asks the LLM to choose the best candidate on its own.
- **COMET-QE**: A trained quality estimation (QE) scorer that assigns a numerical score to each candidate. Selection is based on the highest score.
- **COMET (oracle)**: A reference-based scorer that assigns a numerical score to each candidate. It can be considered as the oracle QE method, representing the upper bound of selection.

# Experiment setting

## Comparative methods

- **Baseline**: standard zero-shot translation with temperature set to 0.
- **Rerank**: we randomly sample three times (temperature=0.3) and add **Baseline** to form four candidates. The best candidate is selected through QE.

## Base model

- Text-davinci-003, Alpaca, Vicuna

## Metrics

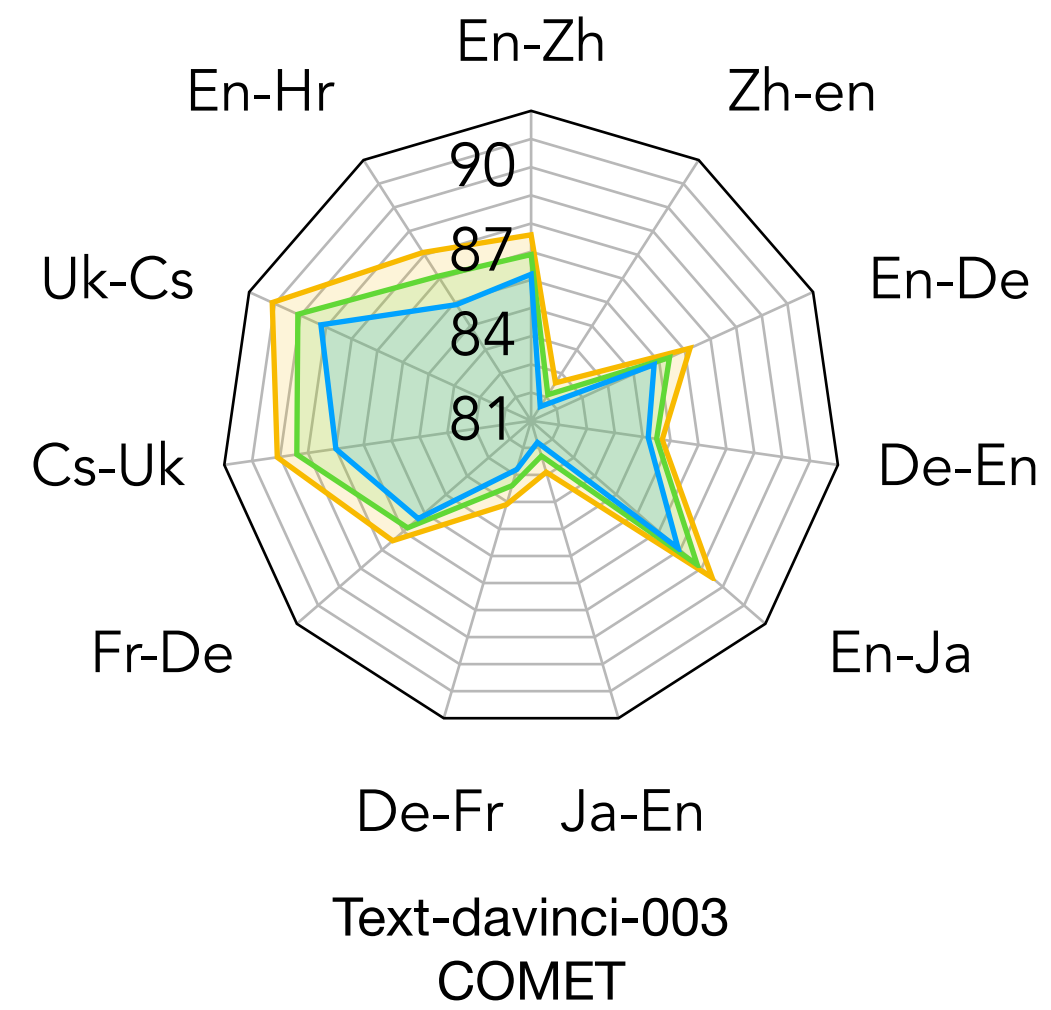

- COMET and BLEURT

## Testsets

- 11 language pairs in WMT22

- Using the same knowledge selection method, **MAPS** outperforms **Rerank** consistently.
- This indicates that the improvements brought by MAPS stem from three types of translation-related knowledge:
  - keywords
  - topics
  - relevant demonstrations.

- MAPS exhibits a higher upper bound for selection.

# Human evaluation

## Preference study

MAPS is generally more preferred by humans.

# Human evaluation

## Multidimensional quality metrics (MQM)

| Method | En-Zh       | Zh-En       |
|--------|-------------|-------------|
| Base   | 1.94        | 2.96        |
| Rerank | 1.79        | 2.84        |
| MAPS   | <b>1.59</b> | <b>2.60</b> |

✓ MAPS reduces mistranslation, awkward style, untranslated text, and omission errors.

Table 2: Averaged MQM Score (↓).

# Hallucination and Ambiguity

Human-annotated hallucination errors

- ☑ MAPS reduces LLM's hallucinations
- ☑ MAPS helps ambiguity resolution

| Method        | COMET       | BLEURT      | Accuracy    |
|---------------|-------------|-------------|-------------|
| <b>Rerank</b> | 81.5        | 70.2        | 61.5        |
| <b>MAPS</b>   | <b>82.2</b> | <b>70.6</b> | <b>65.5</b> |

Ambiguity resolution

# Using single type of knowledge does not result in consistent improvement

| Method          | En-Zh | Zh-En | En-De                    | De-En | En-Ja | Ja-En | De-Fr | Fr-De |
|-----------------|-------|-------|--------------------------|-------|-------|-------|-------|-------|
|                 |       |       | text-davinci-003   COMET |       |       |       |       |       |
| <b>Baseline</b> | 86.2  | 81.6  | 85.8                     | 85.2  | 87.9  | 81.8  | 82.8  | 86.3  |
| <b>+Keyword</b> | 86.2  | 81.5  | 85.5                     | 84.9  | 88.0  | 81.5  | 82.6  | 86.2  |
| <b>+Topic</b>   | 86.4  | 81.7  | 85.6                     | 85.2  | 88.1  | 81.9  | 83.1  | 86.3  |
| <b>+Demo</b>    | 86.9  | 81.8  | 86.6                     | 85.2  | 88.5  | 81.8  | 83.4  | 86.7  |

- ☑ Self-generated knowledge from LLM can be noisy.
- ☑ Using multiple knowledge and knowledge selection are important.
- ☑ Please refer to the paper for further discussion.
